CS61B: Lecture #3 1

- Labs are normally due at midnight Friday. Last week's is due tonight.
- **Today.** Simple classes. Scheme-like lists. Destructive vs. non-destructive operations. Models of memory.

Last modified: Mon Sep 2 13:38:44 2019

CS61B: Lecture #3 2

Values never change.

- Simple containers contain values:

x: 

3
---

 L: 

--

 p: 

--

 →

Examples: variables, fields, individual array elements, parameters.

CS61B: Lecture #3 3

containers:  
Class Object

h	t
3	

Alternative Notation

h	3
t	

Array Object

0	1	2
42	17	9

0	42
1	17
2	9

Empty Object

--

CS61B: Lecture #3 4

reference (point to) containers.

- One particular pointer, called **null**, points to nothing.
- In Java, structured containers contain only simple containers, but pointers allow us to build arbitrarily big or complex structures anyway.

Last modified: Mon Sep 2 13:38:44 2019

CS61B: Lecture #3 5

- In Java, *all* simple containers are named, *all* structured containers are anonymous, and pointers point only to structured containers. (Therefore, structured containers contain only simple containers).

- In Java, assignment copies values into simple containers.
- *Exactly* like Scheme and Python!
- (Python also has slice assignment, as in `x[3:7]=...`, which is shorthand for something else entirely.)

Last modified: Mon Sep 2 13:38:44 2019

CS61B: Lecture #3 6

objects.

- Example: list of integers:

```
public class IntList {
    // Constructor function (used to initialize
    new object)
    /** List cell containing (HEAD, TAIL).
    */
    public IntList(int head, IntList tail)
    {
        this.head = head; this.tail = tail;
    }

    // Names of simple containers (fields)
    // WARNING: public instance variables
    usually bad style!
    public int head;
    public IntList tail;
}
```

Last modified: Mon Sep 2 13:38:44 2019

CS61B: Lecture #3 7

```
IntList Q, L;
```

Q: 

```
L = new IntList(3,
null);
Q = L;
```

```
Q = new IntList(42,
null);
L.tail = Q;
```

```
L.tail.head += 1;
// Now Q.head == 43
// and L.tail.head == 43
```

Last modified: Mon Sep 2 13:38:44 2019

CS61B: Lecture #3 8

- Some folks find the idea of "copying an arrow" somewhat odd.
- Alternative view: think of a pointer as a *label*, like a street address.
- Each object has a permanent label on it, like the address plaque on a house.
- Then a variable containing a pointer is like a scrap of paper with a street address written on it.

- One view:

- Alternative view:

CS61B: Lecture #3 9

Last modified: Mon Sep 2 13:38:44 2019

CS61B: Lecture #3 10

like assigning an integer to a variable.

- So, after executing "last = last.tail;" we have

- Alternative view:

- Under alternative view, you might be less inclined to think that assignment would change object #7 itself, rather than just "last".
- BEWARE! Internally, pointers really are just numbers, but Java treats them as more than that: they have *types*, and you can't just change integers into pointers.

CS61B: Lecture #3 11

gers, *L*, and an integer increment *n*, return a list created by incrementing all elements of the list by *n*.

```
/** List of all items in P incremented
by n. Does not modify
* existing IntLists. */
static IntList incrList(IntList P, int
n) {
    return /*( P, with each element incremented
by n )*/
}
```

We say *incrList* is *non-destructive*, because it leaves the input objects unchanged, as shown on the left. A *destructive* method may modify the input objects, so that the original data is no longer available, as shown on the right:

CS61B: Lecture #3 12

Last modified: Mon Sep 2 13:38:44 2019

CS61B: Lecture #3 13

```

by n. */
static IntList incrList(IntList P, int
n) {
    if (P == null)
        return null;
    else return new IntList(P.head+n, incrList(P.tail,
n));
}
  
```

- Why does `incrList` have to return its result, rather than just setting `P`?
- In the call `incrList(P, 2)`, where `P` contains 3 and 43, which `IntList` object gets created first?

CS61B: Lecture #3 14

*NOT* tail recursive.

Easier to build things first-to-last, unlike recursive version:

Last modified: Mon Sep 2 13:38:44 2019

CS61B: Lecture #3 15

```

static IntList incrList(IntList
P, int n) {
    if (P == null) <<<
        return null;
    IntList result, last;
    result = last
        = new IntList(P.head+n,
null);
    while (P.tail != null) {
        P = P.tail;
        last.tail
            = new IntList(P.head+n,
null);
        last = last.tail;
    }
    return result;
}
  
```
